

7 Signs

That Your Business Needs
Managed Cyber Security

The constantly evolving threat landscape makes a robust security program a moving target. Managed Cyber Security Services offer organisations the breadth of knowledge, depth of functionality, and dedicated support they need to defend against risks effectively.

The challenge lies in recognising and reducing complexity. A Managed Cyber Security Service will be able to achieve this while providing your business with a simple and effective defence against threats.

- 1 Complexity
- 2 Skills Shortage
- 3 Budget Constraints
- 4 Time & Resources
- 5 Security Roadmap
- 6 Lack of Secure Mobility
- 7 On-Demand Support

1 Complexity

The security technology landscape is constantly expanding, evolving and changing.

This means security teams often have a plethora of tools, products and services to juggle.

Reducing complexity means your IT resources have time to focus on what really matters while providing a consolidated and integrated security architecture.

2 Skills Shortage

Due to the massive cyber security skills shortage worldwide, finding experienced cyber security personnel to manage your infrastructure has become exceedingly difficult.

Partnering with MySky Networks allows you to leverage their experienced and certified resources to ensure your architecture is being managed by the best.

3 Budget Constraints

Struggling to justify the outlay of capital required for your cyber security needs?

By utilising a managed service, it allows you to switch from a CAPEX model to an OPEX model.

This puts less strain on your pocket while ensuring you get best-of-breed technologies.

4 Time & Resources

Your IT resources are already under pressure when it comes to managing their time.

Wouldn't you rather they spent it on what matters most to the business?

Let us help ease the workload while ensuring you are protected 24/7.

With the shortage of skills, this usually means you need to justify additional headcount for a dedicated security engineer.

With managed services, the support is built into the cost, providing you with dedicated resources.

5 Security Roadmap

With the security landscape constantly evolving, a clearly defined and structured roadmap is key to ensuring your business is always leveraging the latest technologies.

Developing a robust security roadmap and posture starts with getting the fundamentals right.

A clearly defined and structured roadmap will allow you to address the fundamentals, and then ensure you are leveraging the latest technologies along the way. Let us be your guide on this journey.

6 Lack of Secure Mobility

The world has changed; the move to remote workforces has inherent security issues and concerns.

We can ensure your remote workforce is fully-protected, no matter their location.

7 On-Demand Support

When problems arise, you need a Managed Services Partner who can offer dedicated support, on-demand, and in real-time.

We also provide proactive services to ensure you're aware all the time, not only once an issue is detected.
